

CURRENT STATE ARCHITECTURE

Payer-specific Extracts Built Directly from Clarity

Decentralized • Payer-Specific • Hard-coded • Ad-hoc Reconciliation • Limited Standardization & Governance

1. SOURCE SYSTEM

Clarity Database

- ~25 Clarity Tables
- Multiple Joins
- Raw Operational Data

2. PAYER-SPECIFIC EXTRACTIONS & LOGIC (Hard-coded SQL / Code-Based Logic)

UHC
Extract

Hard-coded SQL & Logic

- CPT/HCPCS Filters
- Specialty Mapping
- Bill Type Mapping
- Hard-coded Values

Humana
Extract

Hard-coded SQL & Logic

- CPT/HCPCS Filters
- Specialty Mapping
- Bill Type Mapping
- Hard-coded Values

BCBS
Extract

Hard-coded SQL & Logic

- CPT/HCPCS Filters
- Specialty Mapping
- Bill Type Mapping
- Hard-coded Values

Aetna
Extract

Hard-coded SQL & Logic

- CPT/HCPCS Filters
- Specialty Mapping
- Bill Type Mapping
- Hard-coded Values

...
Extract

Additional Payers
(Essence, Global, etc.)

Unique SQL & Logic
Per Payer

3. PAYER LAYOUT CONVERSION (PAYER-SPECIFIC)

UHC
Layout File

Humana
Layout File

BCBS
Layout File

Aetna
Layout File

...
Layout File

4. SUBMISSION TO HEALTH PLAN (HP)

UHC

Humana

BCBS

Aetna

...
Other HPs

5. RESPONSE & RECONCILIATION (AD-HOC & NON-SYSTEMATIC)

MAO / Response
Files

Ad-hoc
Manual Review
(Non-Standard)

Ad-hoc
Manual Review
(Non-Standard)

KEY CHARACTERISTICS & CHALLENGES

Code-Centric Implementation

Business rules and logic
are embedded directly in
SQL code for each payer.

Duplicated Logic

Similar logic re-built
for each payer.
High effort & rework.

Hard-coded Values

CPT lists, mappings, plan IDs,
filters, and defaults hard-coded
in SQL. Not configurable.

Inconsistent Logic

Business rules and filters
vary across payers.
No standardization.

Ad-hoc Reconciliation

MAO/response files reviewed
manually and inconsistently.
No systematic matching.

Limited Traceability

No end-to-end lineage
from source to HP
response.

High Maintenance

Every change requires
SQL updates across
multiple extracts.

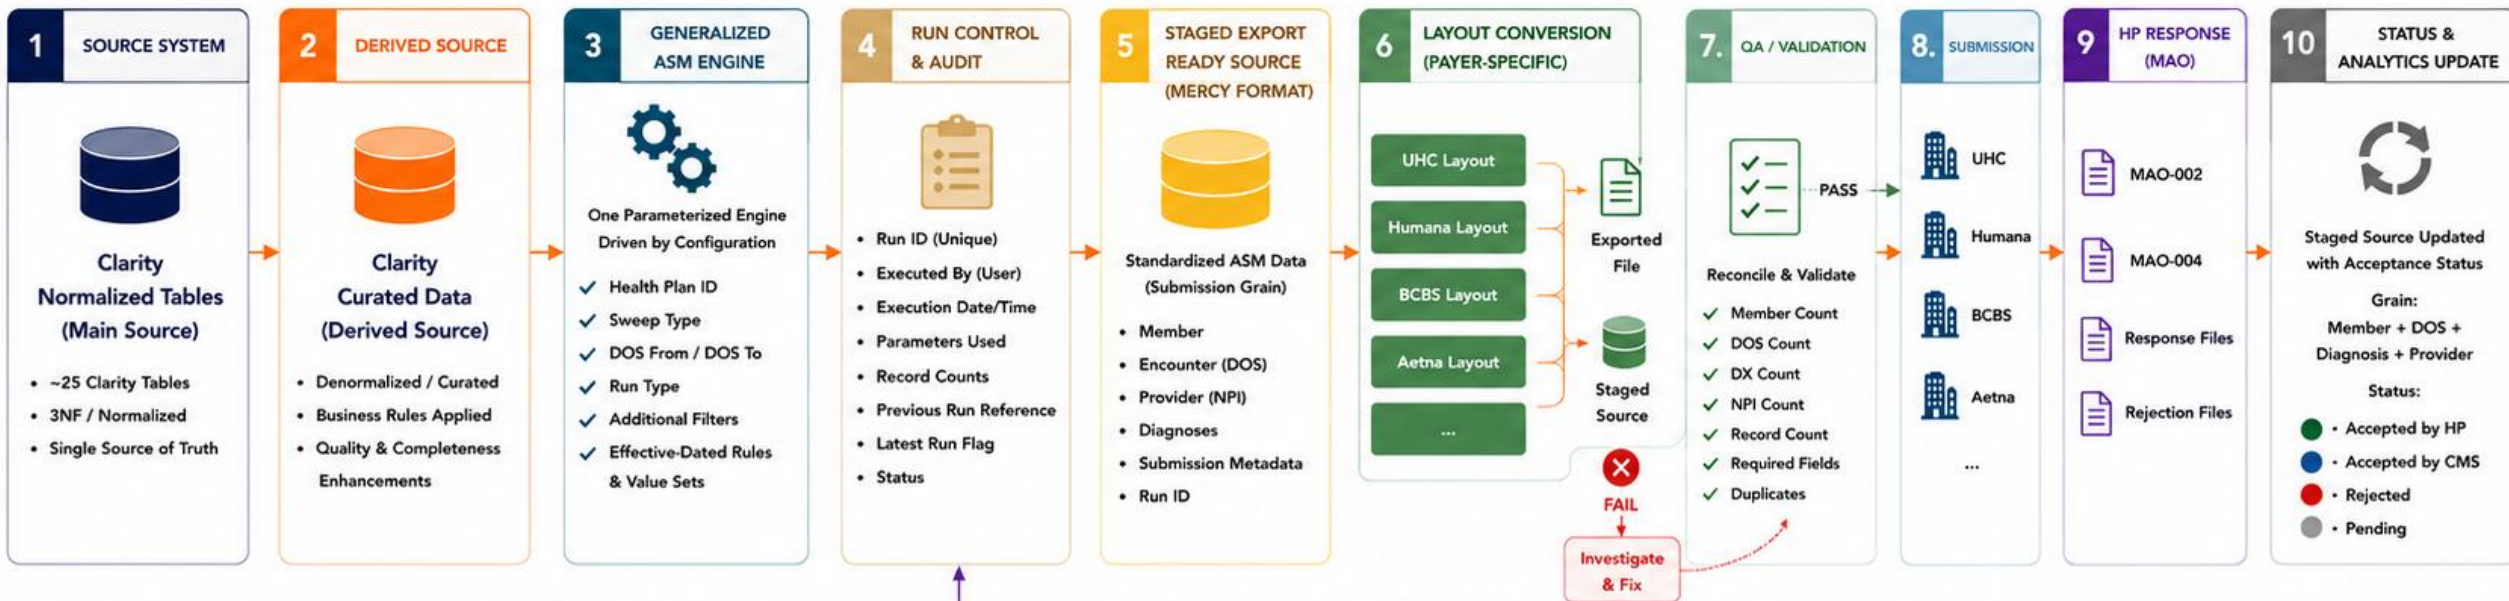

Higher Risk

Greater operational risk,
errors, and audit
exposure.

FUTURE STATE ARCHITECTURE

Centralized Engine, Standardized Staging, Payer-Specific Layouts, Full Reconciliation & Analytics

11. ANALYTICS & REPORTING (BUILT ON STAGED DATA)

KEY BENEFITS

- ✓ Standardized Logic & Consistent Data
- ✓ Configurable & Easy to Maintain
- ✓ End-to-End Traceability & Auditability
- ✓ Automated QA & Higher Data Quality
- ✓ Systematic Reconciliation & True Source of Truth
- ✓ Actionable Analytics & Insights

→ Data Flow (Forward)

→ Reconciliation Feedback Loop
